PROFILE

Final-year Computer Science and Engineering student at North South University and **Research Assistant** at the Microprocessor, Embedded Systems, and IoT Lab (MESIL). I design processors in RTL and verify them on **FPGA hardware**, and have built **MIPS, RISC-V and ARM cores from single-cycle to pipelined** on a low-cost FPGA board. Seeking higher study in **computer architecture, RTL design and FPGA systems**.

EDUCATION

BSc in Computer Science and Engineering 2022 – 2026 (expected)
Department of Electrical and Computer Engineering, North South University, Bangladesh

- **Thesis:** RTL Design and Hardware Verification of a Multi-Cycle Processor on a Low-Cost FPGA Development Board (defended 2026)
- **Supervisor:** Dr. Mohammad Abdul Qayum, Assistant Professor, Dept. of ECE
- **Relevant coursework:** Computer Organization and Architecture, Microprocessor Interfacing & Embedded System, Operating Systems Design, Data Structures and Algorithms, Database Systems, Artificial Intelligence, Machine Learning, Pattern Recognition and Neural Network

RESEARCH EXPERIENCE

Research Assistant Sep 2026 – Present
Microprocessor, Embedded Systems, and IoT Lab (MESIL), Dept. of ECE, North South University
Supervisor: Dr. Mohammad Abdul Qayum

- Design, implement and verify processors in RTL on **FPGA hardware**: **MIPS, RISC-V (RV32I, RV32IM) and ARM** cores in single-cycle, multi-cycle and pipelined forms.
- Lead **microarchitecture comparison studies** of ARM, RISC-V and MIPS cores, all built on the same RZ-EasyFPGA A2.2 board (Intel Cyclone IV E, EP4CE6E22C8); **journal paper in preparation**.
- Fit each core within the board's very limited logic-element budget while keeping the hardware standard, correct and verifiable.

PUBLICATIONS

Md. Rakib Rayhan, Mohd Atik Akbar Rahat, Adnin Hossain, A F Dhrubo, Mohammad Abdul Qayum, Mohsin Sajjad. *Design and Hardware Verification of a 32-Bit Multi-Cycle MIPS Processor on a Low-Cost Cyclone IV FPGA*. Submitted to the International Conference on Computer and Information Technology (ICCIT 2026).

PROCESSOR DESIGN PROJECTS

Microarchitecture Comparison Studies: ARM, RISC-V and MIPS MESIL research

- Comparing the behavior of single-cycle, multi-cycle and pipelined cores across ARM, RISC-V and MIPS on one low-cost FPGA board; ongoing research at MESIL Lab, NSU.

ARM Processors (ARMv4 subset) on FPGA Verilog · Cyclone IV

- Built single-cycle, multi-cycle and pipelined ARM cores on the same board as the RISC-V study, for ARM-versus-RISC-V comparison on identical hardware.

RISC-V Processors (RV32I, RV32IM) on FPGA Verilog · Cyclone IV

- Built a single-cycle RV32I core and multi-cycle and pipelined RV32IM cores with multiply and divide; the main challenge was fitting full designs into very limited logic elements.

MIPS Processors on FPGA Verilog · Cyclone IV

- Built single-cycle, multi-cycle (undergraduate thesis) and pipelined MIPS cores; the thesis core was presented at the Bangladesh Innovation Fair 2026.

32-bit Single-Cycle MIPS Processor with Operating System Verilog · C++

- Designed a 32-bit single-cycle processor on a custom MIPS-like ISA with separate instruction and data memories, supporting arithmetic, logical, memory and control-flow instructions, including JAL and JR for subroutine calls.

- Wrote a C++ assembler and a minimal operating system in MIPS assembly that computes the maximum, minimum and mean of ten integers using modular subroutines; verified functionally in ModelSim.

23-bit Single-Cycle MIPS CPU Logisim · Python

- Designed a single-cycle CPU in Logisim around a self-defined 23-bit MIPS-inspired ISA, with the complete datapath, control unit and ALU control logic, and a Python assembler that produces hex machine code for the instruction memory.

OTHER PROJECTS

- **Knowledge distillation for rice variety classification:** teacher–student framework for 20 Bangladeshi rice varieties; ResNet50 teacher **98.59%** accuracy, lightweight CNN student **96.06%** with **13.31× fewer parameters**; Grad-CAM analysis.
- **Psychological distress self-assessment:** hybrid machine-learning approach classifying anxiety, stress and depression levels in university students, comparing 15 algorithms.
- **Custom memory allocator:** thread-safe malloc/free in C on Linux system calls, with an optimized block-reuse strategy, benchmarked under multi-threaded load.
- **SneakPick:** Django e-commerce application with catalog, accounts, cart, checkout, order tracking and reviews.
- **Football Club Management System:** full-stack PHP and MySQL web application with secure authentication, modules for clubs, managers, coaches, players, matches and stadiums, and an admin dashboard.
- **Wedding Management System:** console-based Java application for planning and booking wedding packages across three regions of Bangladesh, with admin management of employees and staff teams.
- **SUROKKHA, COVID-19 vaccine management system:** console-based C system for vaccine registration, status checks and record updates, with administrator tools.
- **Banking simulator:** console-based mobile financial service simulator in C with login, transfers, bill payments, transaction history and a reward-points system.

LEADERSHIP & ACTIVITIES

Vice Chair (Technical), IEEE North South University Student Branch Apr 2025 – Apr 2026

- Organized **more than a hundred** technical events and activities for students.
- Key events organized: **IEEE Student Transition and Elevation Partnership (STEP) 2025: Igniting Future Innovators**; **Student Professional Awareness Conference (SPAC-25)**; the national **Future Builders: AI-Driven Cognitive Innovation Hackathon**; **Skill Development Venture** (a series of events); and **IEEE Day** (a series of events).
- During this tenure, the branch received the **2026 IEEE Region 10 Outstanding Student Branch Award**.

Bangladesh Innovation Fair 2026 2026

- Represented North South University as a Research Assistant at MESIL, presenting FPGA processor work.

BD Apps National Hackathon 2023 2023

- Selected for the regional round.

TECHNICAL SKILLS

HDL	Verilog, VHDL
EDA tools	Intel Quartus, ModelSim, Questa, Logisim
Architectures	MIPS, RISC-V (RV32I, RV32IM), ARM (ARMv4 subset)
FPGA	Intel Cyclone IV E (RZ-EasyFPGA A2.2), Quartus synthesis, on-board debugging (ISSP, In-System Memory Content Editor)
Programming	C, C++, Python, Java, PHP, MIPS assembly
Web	HTML, CSS, MySQL, Django
Machine learning	CNNs, knowledge distillation, classical ML pipelines

LANGUAGES

English	Fluent
Bangla	Native
